CRIMSON DAWN WATERSLIDE DECALS

PAGE 1 = PLAIN PAPER ONLY - DO NOT PRINT ON TRANSFER STOCK

On waterslide paper print ONLY page 2 (white) or page 3 (clear).

Transfer pages

- WHITE waterslide paper -> PAGE 2 (crimson + white edge)
- CLEAR waterslide paper -> PAGE 3 (crimson + black outline)

Pages 2-3 are nested/packed to burn less film. Cut close to each cloud.
Print at 100% / Actual size (no fit-to-page).

Print + seal

1. Load transfer paper printable-side correctly.
2. Print only the page you need (2 or 3) - not this page.
3. Inkjet: dry fully, then 2-3 light clear acrylic coats (or brand sealer); cure.
4. Laser: follow your pack; many need no spray.

Apply

1. Gloss-varnish the pad first.
2. Cut tight to the cloud (ignore neighbour nesting).
3. Soak lukewarm 20-60s; slide onto RIGHT shoulder.
4. Blot center-out; optional Micro Set / Micro Sol on curves.
5. Dry, then gloss + matt seal.

Sheet mix: mostly 9mm infantry, plus 7/5/11/14mm and a few larger marks.
Packed tight - cut carefully between neighbours.

Regenerate: python3 docs/warhammer/generate_waterslide_decals.py

PAGE 2 - FULL COLOUR - WHITE WATERSLIDE ONLY (do not print page 1 on film)

Crimson + white edge. Dense pack. Cut close. 100% scale.
